Question: A continuous time, band-limited signal x(t) has its Fourier transform described by:

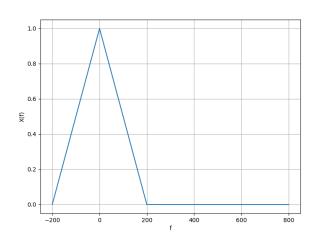

$$X(f) = \begin{cases} 1 - \frac{|f|}{200} & \text{if } |f| \le 200\\ 0 & \text{if } |f| > 200 \end{cases}$$
 (1)

The signal is uniformly sampled at a sampling rate of 600 Hz. The Fourier transform of the signal is $X_s(f)$. What is the value of $\frac{X_s(600)}{X_s(500)}$?

Solution:

Parameter	Description	Value	
X(f)	Fourier transform of $x(t)$	$\begin{cases} 1 - \frac{ f }{200} \\ 0 \end{cases}$	if $ f \le 200$ if $ f > 200$
$X_s(f)$	Fourier transform of sampled signal		?
	TARIFI		

INPUT PARAMETERS

$$X_s(f) = \frac{1}{600} \sum_{k=-\infty}^{\infty} X(f - 600k)$$
 (2)

$$\implies X_s (f + 600) = \frac{X(f)}{600} \tag{3}$$

Using (1)

$$X_s(600) = \frac{X(0)}{600} \tag{4}$$

$$\Rightarrow X_s(600) = \frac{1}{600}$$

$$X_s(500) = \frac{X(-100)}{600}$$

$$\Rightarrow X_s(500) = \frac{1}{2 \cdot 600}$$
(5)
$$(6)$$

$$X_s(500) = \frac{X(-100)}{600} \tag{6}$$

$$\implies X_s(500) = \frac{1}{2 \cdot 600} \tag{7}$$

$$\frac{X_s(600)}{X_s(500)} = 2 \tag{8}$$
